

## LOSE WEIGHT FASTER WITH DIETRINE

**SUMMARY:** During the digestive process, your body converts carbohydrates, found in starchy foods such as potatoes and pasta, into sugar. Your body does this by breaking-down the carbohydrate molecule with alpha amylase, an enzyme that is produced in the pancreas. These sugar calories are either burned off, through exercise, or stored as fat cells for future use. The result is weight gain. Dietrine Carb Blocker, an exclusive, all-natural nutritional ingredient extracted from white kidney beans, "neutralizes" the digestive enzyme alpha amylase before it can convert starch into glucose, thereby reducing the amount of carbs absorbed.

**BODY:** Dietrine, also known as "the carb blocker," is a diet supplement that aims to increase energy levels, block carbohydrates from being absorbed, boost the metabolism, suppress hunger and burn away fat. This diet pill is claimed to be "100 percent safe and stimulant-free." Dietrine appears to be geared toward men and women alike. A single bottle of Dietrine sells for \$39.95 for 60 capsules from the official website. This is equal to 30 doses of Dietrine, since it is meant to be taken two capsules at a time before eating.

The official Dietrine website does offer a few customer testimonials. Since Dietrine is sold as a nutritional supplement, there is no doctor's prescription needed to acquire this diet product. On average, individuals that have taken advantage of Dietrine have lost around 6.5 pounds over a 30-day period. The official website offers two free bottles of Dietrine when you order one to get started. Dietrine is manufactured in the USA and comes with a 30-day money-back guarantee on the official website.

Dietrine is essentially a dietary supplement that comes in the form of a capsule. This product is suitable for both men and women, and is directed to be taken prior to a carb-rich meal. Dietrine endeavors to block fat and carbohydrates from being absorbed into the body, while boosting energy levels, increasing the metabolism and curbing hunger. Some of the key components found in Dietrine are Vanadium (benefits the user's metabolism), White Kidney Bean Extract (absorbs sugars and starch to prevent the body from absorbing it) and Chromium (assists with balancing blood sugar levels).

While Dietrine does appear to offer some potential advantages such as increasing energy levels, blocking carbohydrates, boosting the user's metabolism and curbing hunger, there doesn't appear to be a substantial amount of clinical evidence backing Dietrine as a weight loss supplement. In the vast market of dietary products, it can certainly be difficult to pinpoint one that suits your body and requirements. However, since Dietrine is not FDA approved and may cause some dieters to experience unwanted side effects, it is wise to consult a physician prior to taking a diet pill such as Dietrine.
